

calgonit VIROFLEXX

Used for drinking water treatment

Wide-range disinfectant for surfaces, equipment, boots, tyres and water systems

compact powder

greatest efficiency

rapid effect

versatile use

Application to all surfaces

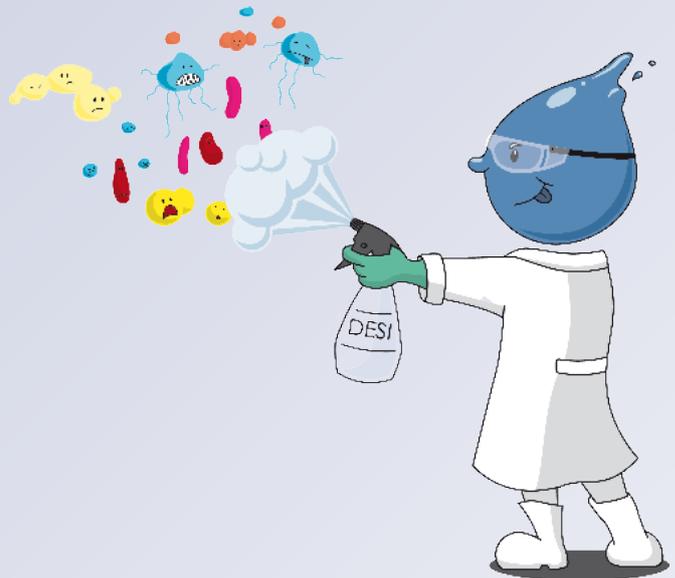

The product:

calgonit VIROFLEXX is an innovative, highly effective and versatile wide-range disinfectant for application to surfaces, equipment, water systems and the air.

The combination of surface-active substances, potassium peroxymonosulfate and organic acids ensures highly effective disinfection.

The product is a compact powder and is thus particularly easy to transport.

Technical data:

Appearance:	white powder
Smell:	characteristic
pH-value (1%):	2.2

Use in drinking systems

Solution (basic disinfection): 1 : 100 (10 g in 1 litre water)

Application: Drain pipes and clear away coarse dirt, refill with water, allow calgonit VIROFLEXX solution to take effect for 10 minutes. Flood the system and allow the take effect for a further 45 minutes. Drain solution and fill with fresh water.

Solution: (continuous disinfection): 1 : 1000 (1 g in 1 litre water)

Application: Use a dosing device to dispense a 1%ig solution into the system

Surface disinfection

Solution: 1:100 (10 g in 1 litre water)

Application: High-pressure cleaner, backpack sprayer (300 mL per m²)

Cleaning and disinfection of equipment

Solution: 1:100 (10 g in 1 litre water)

Application: Spraying process (300 mL per m²)

Cleaning and disinfection of tyres and boots

Solution: 1:100 (10 g in 1 litre water)

Application: Trough (replace contaminated solution, at least every 4 days)

Air disinfection in unoccupied stable

Solution 1:200 (5 g in 1 litre water)

Application: High-pressure cleaner or backpack sprayer.

1 litre solution per 10 m² floor surface.

Cold fogging in unoccupied stable

Solution: 1:100 (10 g in 1 litre water)

Application: Fog machine. 1 litre solution per 10 m² floor surface.

Use biocides with care. Always read the label and product information before use.
